

CASE STUDY: TECHNIQUE TRAINING LTD

Category: Training provider
Region: Midlands
Sector: Building services engineering

In focus:
Certificate for Domestic Electrical Installers
VRQ - Level 2

Including Applicable Building Regulations (Part P) – standalone unit

This nationally recognised qualification is suitable for those who carry out electrical work under the scope of Part P of the 2005 Building Regulations. Successful candidates will be able to demonstrate the technical knowledge to be nominated as a 'Qualified Supervisor' with a Competent Persons Scheme.

- Recognised by organisations that operate a Competent Persons Scheme.
- Understand the relevant parts of the Building Regulations and 17th Edition IEE Wiring Regulations.
- Updated structure to support training providers with delivering and assessing the qualification.

Centre profile:

Technique Training is an independent training consultancy, specialising in control, electrical, mechanical and data communications. The company has delivered EAL's Certificate for Domestic Electrical Installers to over 700 candidates representing employers such as Corgi, Telnet (formerly Marconi), London Eye and Procter and Gamble.

"EAL is a responsive organisation which is approachable and listens to the views of those delivering and receiving the training. The result is high quality qualifications, which are based on the needs of industry."

Tony Blackwell, director and co-owner, Technique Training

The challenge:

Technique Training helps its customers to address skills shortages and update their training in line with the latest legislation, including the 2005 Building Regulations (Electrical Safety Part P) and the 17th Edition Wiring Regulations (BS7671: 2008).

The solution:

Technique Training delivers EAL's electrical qualifications on behalf of employers. This is either on-site or within Technique's contemporary, multi-premise facilities, which combines classrooms, workshops, tutor rooms and an IT suite. This setup makes use of an array of test rigs, enabling candidates to tap into virtual 'real life' situations.

The results:

Forty workers at Procter and Gamble's Thurrock plant were able to meet health and safety requirements, satisfy employment regulations and formalise their levels of competence by completing the Certificate for Domestic Electrical Installers. The qualification provides the technical knowledge to support 'Qualified Supervisors' on Competent Persons Schemes.

The benefits:

The qualification offers a combination of theory and practice, giving existing electricians an understanding of how the Building Regulations affect their work. Unit 1 can also be studied as a standalone module to reach the minimum standards required to work under the regulations.

The future:

Technique will continue to address the latest standards by delivering EAL's full and update qualifications for the 17th Edition (BS7671: 2008).
